DETAILED ACTION

Request for Continued Examination

1. The request filed on 9/16/2008, for a Request for Continued Examination (RCE), is acceptable and a RCE has been established. An action on the RCE follows.

Allowable Subject Matter

2. Claims 1-10, 12-14, and 16-18 are allowed.

3. The following is an examiner's statement of reasons for allowance: The present invention comprises a method and apparatus for transmitting layer channel symbol as linear combinations of complex modulation symbol via at least two transmit paths, constructing the layered channel symbols using at least first and second non-zero coefficients in at least one layer in a linear combination, wherein the ratio of the first and second coefficients is not a real number, and transmitting at least one modulation symbol using a first non-zero total power and a second non-zero total power on first and second transmit paths, respectively. The closest prior art, Walton et al. (US 2002/0154705), Tirkkonen et al. (WO 03/001728), and Ketchum et al. (US 20030048856), disclose a similar system that transmits channel symbols that are a linear combination of complex modulation symbols over at least two transmit paths, constructs the channel symbols using a pre-coding matrix, and transmits a symbol using a first total power and a second total power on first and second transmit paths, respectively. However, Walton et al., Tirkkonen et al. and Ketchum et al. fail to disclose using for at least another modulation symbol, the first non-zero total power for transmission on the second transmit path, and the second non-zero total power for transmission on the first transmit path, wherein the first and second non-zero total powers are not equal as recited in claims 1, 7, 8, and 12. Rather, Walton and Ketchum

disclose that power control in a communication system is a closed-loop control mechanism where the power used on some resource is controlled based on measurements. Whereas, the present claims are directed to an open-loop space-time block code. Therefore, Walton is directed to subject matter non-analogous to the present invention. Tirkkonen fails to cure the deficiencies of Walton and Ketchum with respect to the aforementioned claim features. These features distinguish independent claims 1, 7, 8, and 12 over the prior art, rendering them allowable. Dependent claims 2-6, 9, 10, 13, 14, and 16-18 are likewise allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
